

More information

The first NSW Ambulance Station for Iluka is being delivered as part of the \$122 million Rural Ambulance Infrastructure Reconfiguration (RAIR) program; delivering purpose-built and modern stations to support the clinical capability of our paramedics.

To date, 24 upgraded, rebuilt or new regional and rural ambulance stations have been announced under the RAIR program, including completed stations at Wagga Wagga, Coolamon, Ardlethan, Harden, Molong, Griffith, Kiama, Berry, Bay & Basin and Toukley, Wauchope, Hamlyn Terrace, Bathurst Pottsville, Yass, Rutherford, Bungendore, Cowra, Grenfell, Goulburn and Birmingham Gardens.

This represents the biggest regional and rural transformation of NSW Ambulance infrastructure in the organisation's history.

This first Ambulance station for Iluka will enable local NSW Ambulance paramedics to better meet the current and future demand for mobile emergency medical care in Iluka and surrounds.

Station features

The Iluka NSW Ambulance Station is being designed with input from local paramedics and tailored to the needs of the local Iluka community and surrounds.

Once completed, the new station will include:

- Internal parking for up to four emergency ambulance vehicles
- Administration and office areas
- Staff amenities
- Logistics and storage areas
- Relief accommodation
- Staff parking
- Delivery and loading bay
- Internal wash bay.

Photovoltaic Solar Energy System

The station will feature a Photovoltaic Solar Energy System as part of the build, aiming to improve energy efficiency by generating electricity from an environmental-friendly power source.

The solar system is also being trialled at Cootamundra and Sawtell. These stations will act as a pilot and allow NSW Ambulance to gather further data on the efficiencies and return on investment of solar panels.

The site

Land at 75-79 Spenser Street, Iluka has been identified as the preferred site for consideration. The site provides optimum response capability and the capacity to meet the station's requirements.

Next steps

Next steps include further due diligence, property acquisition, preliminary design and seeking planning approval for the new station.

A community information stand as part of planning approval and local neighbourhood visits will also take place.
